## NOW OFFERING LOW DOSE 3D MAMMOGRAPHY

755 Mt. Vernon Hwy NE  
#310, Atlanta  
(404)252-3430

Breast cancer is the second-leading cause of cancer deaths among women. In order to help with early detection, Dr. Carolyn G. Dudley at **DIAGNOSTIC RADIOLOGY ULTRASOUND & BREAST CENTER, PC** now offers lower dose 3D digital mammography (breast tomosynthesis).

This innovative service is an imaging procedure that uses lower dose x-rays to create a 3D image of the breasts. Conventional mammography takes pictures of the breast from two angles — up/down & left/right — but tomosynthesis takes multiple pictures from several angles. This enables Dr. Dudley to visualize thin slice images of the breast tissue and benefits include earlier detection of small cancers, precise treatments initiated sooner & fewer repeat images. 3D digital mammography is ideal for women who are breast cancer survivors, at high risk for breast cancer, or have a family history of breast cancer. **Visit: [www.mammogramatlanta.com](http://www.mammogramatlanta.com)**
